

Gain new IP whilst minimising R&D costs

Our **Industrial Fellowships** provide **funding** so individuals can pursue a PhD whilst working, allowing **companies** to conduct **innovative research** that furthers their business objectives, accelerates the creation of **exploitable IP** and offers exciting **personal development** opportunities for the brightest employees.

“The Fellowship has opened up opportunities with the academic community, in particular new international collaborations through the Fellowship’s generous travel budget”

Tom Lipinski, Q-Bot

“The Industrial Fellowship has been a great way to gain innovative advantage with the limited resources inherent to SMEs. It gave us control over the research being conducted and ownership of new IP. In fact, we’ve patented five new technologies as a direct result of the Fellowship”

Dr Ian Towle, Ketonex

“Unlike a conventional PhD, the Industrial Fellowship has allowed us to develop a project that was directly tied to company aims, because the Fellow is employed by us throughout. This has really helped in the development of our competitive advantage”

Brian Butchart, SIRAKOSS
